

PROSTHETIC
COMPONENTS LINE

Founded more than 30 years ago, in Barueri, São Paulo, Dérig was established with the objective of changing the dentistry quality paradigm.

We perform an ongoing work of technical-scientific development along with a very qualified team formed by dentists, engineers, chemists, pharmacists and an outstanding team of industry professionals.

A broad team of researchers with large clinical and scientific background in osseointegration and oral rehabilitation provides ongoing advice, which directly reflects in the continuous improvement and innovation of Dérig products.

OUR QUALITY CONTROL

Dérig carries out a stringent quality control to assure maximum performance of each of our implants, with inspection of critical portions made for all manufactured batches, according to the following process:

1. Manufacture release
2. Inspection during manufacture/machining
3. Inspection of Quality Control in 100% of functional quotas and inspection by sampling in the other non-functional quotas. The Inspection process sampling is validated according to ABNT NBR 5425, 5426 and 5427.

Another aspect of our company is the ongoing pursuit of an agile and customized service.

Thus, dedication, investments in state-of-the-art technology, refined understanding of each professional needs, and technical-scientific development are the factors that impact the choice for different raw materials, production, quality control and maintenance of Dérig products.
